Technical Document

Rapid Connect® Developer Portal Definitions Document

Version 1.85 | Document Date: April 29, 2025

Rapid Connect

Introduction

This document lists the definitions for labels in the Rapid Connect Portal. They are intended to give a brief description of options within the Rapid Connect site and must be used in conjunction with the UMF specification, which provides processing rules for each.

Application Information

Application Type

Virtual Terminal

The web version of a physical credit card terminal or Point-of-Sale (POS) device.

Gateway

A gateway is implemented at the boundary of a network to manage all the data communication that is routed internally or externally from the network.

Shopping Cart

A piece of e-commerce software on a web server that allows visitors to an Internet site to select items for purchase.

Terminal

A device that is used for entering data into and displaying or printing data from.

Mobile

Instead of using your physical plastic card to make purchases, you can pay with your smartphone, tablet or smartwatch.

Integrated POS

An electronic device used to process card payments.

Global Merchant Acquiring (GMA)

A single global acquiring card processing solution for e-commerce business. It offers multi-national payment acceptance and a local market presence through a single source for integration, pricing, funding and reporting.

Card Present (CP)

A transaction initiated and completed at the presence of a card.

Card not Present (CNP)

A transaction where an online authorization request is initiated and completed without the presence of a card, therefore no track/chip data or PIN is captured in the transaction.

Protocol

XML over HTTPS

Extensible Markup Language, Secure Hypertext Transfer Protocol.

TCP/IP

Transmission Control Protocol/Internet Protocol.

SOAP

A messaging protocol specification for exchanging structured information in the implementation of web services in computer networks.

Communication Type

Datawire

Secure Transport for XML and SOAP Interfaces for Rapid Connect

VPN

Acronym for Virtual Private Network

MPLS

Acronym for Multiprotocol Label Switching

Settlement Methodology

Advanced ecommerce

Compass platform only (see functionality grid for supported payment types)

Online Terminal Capture

On-Line Terminal Capture is when a client Authorizes in Rapid Connect creates a batch and sends the batch for settlement through Rapid Connect. It is only available for U.S. clients on the North for Restaurant, Retail, eCom, MOTO, Lodging and Auto Rental industries.

Host Capture

Automated Settlement

Direct Send

PTS Settlement

Payment Facilitator

Fiserv's Global Payment Facilitator Solution is an Aggregator model that allows the Payment Facilitator to offer a suite of services to their sub merchants. The program supports the Card Brand rules and guidelines which enables payment facilitators to facilitate payments seamlessly on behalf of multiple sub merchants.

Global Multi MID

Global Payment Facilitator (PFAC) Solution Model in which the Payment Facilitator and its Sub merchants are boarded to Fiserv and the transactions for the Sub merchants are aggregated on behalf of the sub merchants using their own merchant IDs (MIDs).

Global Single MID

Global Payment Facilitator (PFAC) Solution Model in which the Payment Facilitator and its Sub merchants are boarded to Fiserv and the transactions for the Sub merchants are aggregated under one merchant ID (MID).

Money Transfer

Funding

The merchant will support an individual who will receive funds in a Money Transfer transaction. This transaction is to debit funds from a Visa or Mastercard Debit card account to perform a money transfer to another eligible Visa or Mastercard card.

Payment

The merchant will support an individual who will pay funds in a Money Transfer transaction. This transaction supports the payment of funds to a Visa or Mastercard card account to complete the money transfer or funds disbursement.

Payment Type Options

Credit

Mastercard

A bank card association that licenses bank credit card programs.

Visa

A bank card association that licenses bank credit card programs.

American Express

A bank card association that licenses bank credit card programs.

Maestro International

A bank card association that licenses bank credit card programs.

Discover

A bank card association that licenses bank credit card programs.

Diners Club

A bank card association that licenses bank credit card programs.

JCB

A bank card association that licenses bank credit card programs.

UnionPay

A bank card association based in China.

Debit

PIN Debit

Sometimes referred to as Online Debit, online debit is processed on the ATM network of the cardholder's bank. The card is swiped or inserted at the Point-of-Sale (POS) and the consumer is asked to enter their Personal Identification Number (PIN). Money comes directly out of the user's bank account. Also could be EFT Network (STAR, Pulse, NYCE and so on).

Pinless/Bill Pay Debit

Pinless Debit payments refer to debit card purchases made over an EFT Network (STAR, Pulse, NYCE and so on) without a customer entering their PIN.

Pinless POS Debit

Functionality designed to support swipe-and-go convenience for debit purchases where cardholders are not required to enter a PIN.

Signature Debit

Sometimes referred to as Offline Debit, is processed in a manner similar to a credit card transaction.
If the debit card carries a card brand, such as Visa or Mastercard, the card may be processed by simply swiping it through a credit card terminal that supports that card's brand. The transaction is processed over the merchant's credit or debit card network and the customer provides their signature as approval of the transaction.

Interac

The Interac Association (branded as simply Interac) is a Canadian nonprofit interbank network that links financial institutions and other enterprises for the purpose of exchanging electronic financial transactions.
Can also be processed in the US through the NYCE network. That is Debit transactions. interac.ca/en/.

Interac Flash

Secure contactless enhancement of Interac Debit. interac.ca/en/interac-flash-consumer.html

Card-Not-Present Debit Routing

Merchant chooses to route a debit card transaction as credit to the lowest cost network for that transaction.

ConnectPay

Debit payment type applicable to PIN and PINless transactions.

Merchant Choice Routing/EFTPOS

Allows ecommerce transactions to flow through the Australian domestic EFTPOS network (See Card-Not-Present Debit Routing).

EBT

EBT Cash Benefits

Electronic Benefits Transfer – A payment card used at the POS to access a government account for Cash.

EBT Food Benefits/SNAP

Electronic Benefits Transfer – A payment card used at the POS to access a government account for Food. SNAP: Supplemental Nutrition Assistance Program formerly known as EBT Food Benefit.

Healthy Incentives Program (HIP)

Program established to help families afford healthy food under key legislative changes in the U.S. POS classifies values for applicable products, and these are passed to the associations for participating Merchants processing EBT. Customers earn bonuses/incentives on their EBT account.

eWIC

WIC is the special supplemental nutrition program for Women Infants Children. E-WIC is the administration of WIC benefits using an electronic payment card.

Fleet

A fuel card or fleet card is used as a payment card most commonly for gasoline, diesel and other fuels at gas stations. Fleet cards can also be used to pay for vehicle maintenance and expenses at the discretion of the fleet owner or manager. Fleet cards are unique due to the convenient and comprehensive reporting that accompanies their use. Fleet cards enable fleet owners/managers to receive real-time reports and set purchase controls with their cards helping them to stay informed of all business related expenses.

Mastercard Fleet

Mastercard branded fuel card.

Visa Fleet

Visa branded fuel card.

WEX

Branded fuel card.

WEX Over the Road (OTR)

Payments and payroll cards that aid fleets; typically used for maintenance and similar purchases.

Voyager

A brand of fuel card from CSI voyager.

Fleet One

A brand of fuel card.

FleetCor

A brand of fuel card from FleetCor Technologies, Inc. (NYSE:FLT).

Next Generation Fleet Card

fuel card designed to help businesses manage their fleet expenses more efficiently with key features.

Check

TeleCheck Paper

TeleCheck's Paper Check Service offers both a warranty and verification service performed as a Face to Face transaction at a Brick and Mortar location to merchants nationwide. All approved checks must be deposited in the Merchant's bank. Processing can require Dual ID processing (Dual ID Processing requires MICR Data, Driver's License, State Code,) or MICR only.

Certegy

Certegy is a Check Service Provider that provides check authorization and guarantee services to merchants and businesses nationwide. Certegy requires Dual ID processing. Dual ID Processing requires MICR Data, Driver's License, State Code and Driver's License Date of Birth to be entered in the transaction.

The two entry methods of processing Certegy checks are:

- MICR information read from the check, Driver's License, State Code and Driver's License Date of Birth
- Hand-keyed MICR information from the check, Driver's License, State Code and Driver's License Date of Birth

TeleCheck ECA – Full MICR and ID

Electronic Check Acceptance offers both a warranty and verification service performed as a Face to Face transaction at a Brick and Mortar location: Dual ID check processing consists of two forms of check writer IDs: Full MICR information (ABA number, checking account number and check sequence number) scanned from the check through a check reader and check writer identification data such as Driver's License and State Code. Approved transactions will be funded in two banking days to the merchant's bank. If the MICR information is keyed (not scanned) the transaction is processed as a Paper Check transaction.

TeleCheck ECA – Full MICR Only

Electronic Check Acceptance offers both a warranty and verification service performed as a Face to Face transaction at a Brick and Mortar location where the full MICR information (ABA number, checking account number and check sequence number) is scanned through a check reader. Approved transactions will be funded in two banking days to the Merchant's bank. If the MICR information is keyed (not scanned) the transaction is processed as a Paper Check transaction.

TeleCheck Internet Check

Provides online customers who prefer to pay online using their bank account a broad-reaching, low-cost payment alternative to credit/debit. Authorize single or recurring personal, business and corporate payments on line in real-time. Funding next banking day for transactions approved prior to 4:00 p.m. CST.

TeleCheck Checks by Phone

Provides customers who prefer to pay by phone using their bank accounts a broad-reaching, low-cost payment alternative to credit/debit. Clients can authorize payments from personal checking accounts in

real-time from their customers over the phone. Funding next banking day for transactions approved prior to 4:00 p.m. CST.

TeleCheck Remote Pay

Provides customers who prefer to initiate recurring payments a broad-reaching, low-cost payment alternative to credit/debit. Initiate recurring payments in a face-to-face environment and process them electronically as a PPD transaction. Funding next banking day for transactions approved prior to 4:00 p.m. CST.

Money Code

Check Service provider value

Prepaid

An open-loop prepaid card is a card with a network logo on it. Examples of networks are Visa, Mastercard, American Express and Discover. These cards can be used at any location that accepts that brand. A closed-loop prepaid card is a card you can only use at certain locations. For example, a closed loop card might be good only at a specific store or group of stores or on your public transportation system. Most closed loop cards do not have a network logo on them.

FD Prepaid Closed Loop

Fiserv's standard closed loop prepaid card solution designed to be used only at the issuer’s locations.
Also referred to as ValueLink.

FD Prepaid Closed Loop with PIN

Version of Valuelink processing with PIN

InComm

A brand of Prepaid Card sold in a Gift card mall environment incomm.com/.

Stored Value Systems

A brand of Prepaid Card. SVS is a global provider of gift cards and stored value solutions. Operates similar to Valuelink. storedvalue.com/en-US/home.

Stored Value Systems with Customer ID

Version of SVS processing with Customer ID

Solspark/Everywhere Gift Card

Fiserv's open loop prepaid card. storedvalue.com/en-US/about/index.

FD Prepaid Closed Loop Internet

Fiserv's standard closed loop prepaid card solution designed to be used only at the issuer’s locations. Available through Compass (ValueLink).

Blackhawk

A brand of prepaid card sold in a gift card mall. blackhawknetwork.com/content/.

NetSpend

A brand of reloadable prepaid debit cards in the U.S.

Other

Private Label

A private label credit card is a store-branded credit card that can only be used at that store. A private-label credit card is a type of revolving credit plan managed by a bank or commercial finance company for either retail or wholesale manufacturers, such as department and specialty stores.

Alternate Payments

Alternative Payments is a method of payment that does not use a credit or debit card. The following are examples of a few methods: Bank transfers, Direct Debits, E-wallets, Mobile (charged to mobile carrier),
Cash on Delivery, Digital Currencies.

PayPal

PayPal Holdings, Inc. provides online payment services in multiple currencies.

Transaction Features

Account Entry Mode

Swiped

Refers to the passage of a magnetic stripe card through a payment processing terminal capable of reading customer payment card information off of the card to process a transaction.

Keyed

Refers to manually entering “keying” customer payment card information into a credit card terminal/machine, an Internet-connected computer or an online (“virtual”) system.

Contactless

A card data entry mode also known as Near Field Communication (NFC), that allows for transference of customer payment card information without a physical connection between the card and the terminal. Transfer of data can be made with either a “Tap” or waive of the card/device in close proximity of the
NFC capable terminal.

In Application/In Browser

A payment that occurs electronically within a mobile application using a payment token.

EMV

EMV is a smart chip technology that offers an additional step for authentication beyond the traditional magnetic stripe card payment for card-present transactions (commonly called Chip and PIN or smart cards).
In addition to the security chip, which is placed inside of a reader during a transaction, EMV also verifies the cardholder’s identity with the use of a PIN or signature.

Credential on File

A card holder authorizes a merchant to store the cardholder's payment credentials for a subsequent transaction.

Barcode

Barcode read (QR) specifically available for Stored Value System Payment Type

Mobile Options

Visa Staged

Digital Wallet operators

Apple Pay

Apple Pay is a mobile payment and digital wallet service. With Apple Pay, owners of certain Apple mobile devices can make in-store (NFC) and in-app payments.

Apple Pay on the Web

Apple Pay on the Web lets you access payment details that your users have stored in their Wallet.

Google Pay

Google Pay is a digital wallet platform and online payment system developed by Google to power in-app and tap-to-pay purchases on mobile devices.

Samsung Pay

Samsung Pay is a mobile payment and digital wallet service by Samsung Electronics that lets users make payments using compatible phones and other Samsung-produced devices.

Click to Pay

Discover digital wallet for secure online checkout.

eCommerce Transaction Indicator

Secure eComm txn

Secure Electronic Commerce Transaction designates an Internet transaction at a 3-D Secure capable merchant and the cardholder information is fully authenticated. Certification to support this feature includes Mastercard Secure Code. Verified by Visa and American Express SafeKey (AESK).

Non-authenticated txn at 3-D Location

"(Non-authenticated 3-D Secure transaction). Designates an Internet transaction where the merchant attempted to authenticate the cardholder information using 3-D Secure with one of the following:

- A non-participating Issuer
- A non-participating cardholder of a participating Issuer
- A participating Issuer, but the authentication server is not available"

Non-authenticated txn. at non-3-D Location

(Channel Encrypted Transaction) – Designates an Internet transaction which involves the use of encryption such as SSL, but not 3-D authentication.

Non-secure txn

Non secure Electronic Commerce Transaction) Designates an Internet transaction where the cardholder's information was transmitted without 3-D authentication or any encryption method.

MasterCard Digital Enablement Service (MDES)

MDES helps transform any connected device into a commerce device to make and receive payments. The MDES platform enables secure payments to take place for contactless and in-app payments.

Amex Digital Wallet (or InApp)

Mobile Wallet payment type for making purchases from phone's app store (In-App) or mobile device.

Union Pay 3DS Authentication Mode

An identity verification product for online payments based on the EMVCo standard. Optimizes the identity verification process adopted for cross-border online payment services.

Miscellaneous

Card Verification (CVV2, DTVV, CVC2, CID/4DBC and CVN2)

The Card Verification Value (CVV) is a three-to-four-digit security code found on the front or back of a credit card that is used to verify authenticity. Each card association has its own name for this value: Visa calls it the Card Verification Value (CVV2), MasterCard calls it the Card Validation Code (CVC2) and American Express and Discover refer to it as Card Identification Digits (CID). The "2" refers to the printed code on the card. (CVV1 is encoded on the magnetic stripe of the card.).

Soft Descriptors

AKA Dynamic Descriptors: Optional field(s) (that is Alternate Merchant Name, Address, City, State, email) supplied if the merchant desires to use given merchant information in the transaction instead of the information stored in the Fiserv Merchant File/Record. These are printed on the cardholder statement.

AVS Address and Zip Code

Address Verification Service (AVS): A system established by the credit card processing associations to verify customer billing addresses submitted with e-commerce payment transactions. Though AVS does not verify the legitimacy of a transaction, Card Not Present merchants can use AVS to accept or decline transactions based on the validity of the billing address information provided by the customer.

Online Download of EMV Key

The merchant performs an initial file download through a series of AdminRequest messages with Transaction Type FileDownload and File Type value of EMV2KEY. Each successful response will return one file data block.

Multiple Clearing Transactions

The linking of multiple presentments with partial amounts to a single approved authorization.

Fraud Flex Detect

Fraud FlexDetect is a white labeled, Fiserv e-commerce fraud solution that utilizes the Accertify® Intercepts risk platform. It performs real-time transactional risk scoring and decisioning (accept, reject or review) based on the client's customized parameters.

Quasi Cash

A Quasi-Cash transaction is defined as the sale of an item that converts to cash, such as transactions performed at a casino cash cage, casino gaming chips, money orders, deposits, wire transfer money orders, travelers' cheques and Visa Travel/Money cards.

Re-Auth

Used to designate a non-recurring reauthorization transaction (for example standing approval, card on file or split shipment transaction).

NACS Product Codes

National Association of Convenience Stores – These are codes that a Convenience Store programs into their POS to identify merchandise (unleaded fuel, cigarettes and so on)

AVS Zip Code Only

Submission of the postal code of the cardholder while attempting to perform address verification.

Master Session Encryption Host Security Module

Key management structure in which a pre-shared Key Encrypting Key (called the “Master” key) is used to encrypt a randomly generated and insecurely communicated Working Key (called the “Session” key). The Working Key is then used for encrypting the data to be exchanged. Session keys are systematically exchanged on recurring basis, that is every 24 hours. This is done using the HSM for the purpose of
protecting consumer PINs at the time of transaction.

Key Block TR-31

Secure format for exchanging symmetric cryptographic keys, defined by the ANSI Standards Committee. There are key attributes within the exchanged data for the TR-31 key block structure when used with Master Session Encryption to provide more security during transmission.

Real-Time Account Updater

Enables a secure systemic, electronic exchange of account information updates between participating/enrolled card issuer and acquirer for credential-on-file merchants.

Card Info Request Indicator

Field used to request detailed information regarding the type of card being used and returned in the Card Information Response.

Authorization Optimization

A digital commerce solution that drives efficiency and revenue by optimizing card-on-file, Bill Payment transactions. Fiserv retries authorization with optimized payload to help reduce declines. To learn more about Fiserv/Fiserv's Authorization Optimization solution, you can click here.

Tran Fee (Merchant Surcharge)

A "Surcharge" is an additional fee that merchants add to relevant transactions as permitted by Card Organization Rules and applicable laws (together, "Applicable Laws"). Processing fee associated with Credit Networks -Visa, Mastercard, Discover, Amex, and Union Pay. Merchants must receive prior approval from the Processor before assessing a Surcharge. Merchants must sign a Processor Surcharging contract or addendum.

Over the Counter (OTC)

Incomm program that allows supplemental benefits for participating retailers carrying eligible OTC products.

Electric Vehicle Charging

Visa-specific fields to support Electric Vehicle Charging/New Fuel Transactions.

Tip Amount

Reporting field from Rapid Connect to CLX for Quick Service Restaurant industry only.

Anticipated Amount

This amount should be sent when merchants need to confirm an amount prior to authorization, such as for a trial subscription, reservation service, or loyalty program.

Future Transaction Amount

This amount should be sent when merchants need additional information related to approval probability for transactions like credential on file, that will help them delivering value through increased approval rates to avoid nonsufficient funds (NSF) declines, offer an alternative to excessive authorization retries, help them comply with network transaction processing rules.

Extended Authorization Service (AES)

This field indicates request for 30-day extended clearing for Visa.

Anticipated Settlement Amount

Field that can be sent in the Authorization request message and downstream Fiserv systems to better select the least cost authorizer to route the transaction.

Terminal Category Codes

Unspecified

Terminal Category Code to be assigned for categories not currently supported.

Electronic Payment Terminal (POS)

A payment terminal, also known as a POS terminal, credit card terminal, EFTPOS terminal and is a device which interfaces with payment cards to make electronic funds transfers.

Automated Fuel Dispensing Machine (AFD)

Automated Fuel Dispenser (AFD) is a machine at a filling station that is used to pump gasoline, petrol, diesel or other types of fuel into vehicles.

Unattended Customer Terminal

Also referred to as Unattended Payment Terminal (UPT) – It is a cardholder-operated payment terminal that reads, captures and transmits card information in conjunction with an unattended self-service device, including, but not limited to, the following:

- Automated Fuel Dispenser
- Ticketing Machine
- Vending Machine

Mobile Terminal (Transponder)

Wireless terminal/device

Mobile POS

POS Entry Mode. Portal point of sale on cell phone/tablet for payment processing

- **mPOS** -Software-based PIN Entry (on Commercial Off-The-Shelf 'COTS' devices)
- **SoftPOS** – Software POS

Electronic Cash Register

An Electronic Cash Register (ECR) is a system designed to enable products to be sold at a retail outlet. Electric cash registers help large retail outlets track sales, minimize register errors, collect inventory data and much more.

Ticket Machine

A ticket machine, also known as a Ticket Vending Machine (TVM), is a vending machine that produces/dispenses ticket (that is Train tickets at railway stations, transit tickets at metro stations).

Call Center Operator

A person who handles incoming calls; subsequently collecting cardholder data over the phone for a telephone order purchase.

eCommerce Customer Present

Cardholder goes to Kiosk and uses their mobile app to make a purchase.

Interactive Voice Response

A telephone technology that can read a combination of Dual-tone multi-frequency (DTMF) touch tones and voice input.

Transit Access Terminal

Contactless and mobile NFC (Near Field Communication) enabled terminals/readers.

Digital Commerce

Next Gen Point of Interaction (POI)

Mastercard product that enhances the way in which merchants interact with shoppers. Merchants must be enrolled with Mastercard to support this program. The digital commerce solutions indicators will strengthen the security and performance of digital commerce transactions and help ensure acquirers and issuers can easily identify them.

PayLinkQR

Allows Merchant to generate a unique link customers can click to access payment page

'XQR - Mastercard QR

This option allows for a MasterCard QR that customers can scan and pay directly through their mobile device

Cash Options

Debit Cash Back

Debit card cashback is a service offered to retail customers whereby an amount is added to the total purchase price of a transaction paid by debit card and the customer receives that amount in cash along with the purchase.

EBT Cash Back

EBT cash back is a benefit offered to an EBT client whereby an amount is added to the total purchase price of a transaction paid for by an EBT card and the customer receives that amount in cash along with the purchase. Retailers that participate in EBT decide what level of "cash back" they will allow a client per visit using the POS device. Each store may have a different policy. Cash back only transactions are possible depending upon the retailer.

Discover Cash Over

The ability to get additional cash in hand over the purchase amount while using a Discover Card at checkout. Marketed as a solution to avoiding ATM fees. Regular purchase APR applies to the cash that is received.

International Currency Solutions

Global ePricing (GeP)

Designed specifically for US based e-commerce/MOTO merchants, Fiserv's Global ePricing℠ service provides the opportunity for on-line merchants to grow their business internationally by pricing goods or services in more than 130 currencies while still receiving funding in USD.

Dynamic Currency Conversion (DCC)

Dynamic Currency Conversion (DCC) or Cardholder Preferred Currency (CPC) is a financial service that offers credit/debit cardholders the ability to see the cost of a foreign transaction converted to their local currency. The cardholder has visibility to all fees up front with no surprises later. This feature is available only for Visa and Mastercard.

Money Transfer

Person to Person

An individual uses an app to move money of their debit card onto another person's debit card.

Merchant Disbursement

An individual has their debit card on file at a company who uses it to pay any debts the individual may owe.

Funds Disbursement

An individual has their debit card on file at a company who uses it to pay any debts the individual may owe.

Wallet Transfer

An individual uses a non-banking tool to pay someone using their debit card.

Business to Business

A merchant is paying another business for their services.

Gambling Payout

A merchant is paying another business for their services.

Account to Account (MC)

Individual makes a transfer from their card account to another person’s card account.

Credit Card Bill Payment (MC)

Allows for Credit Card bill payment using money transfer.

Cash to Card (MC)

Add funds to a prepaid card.

Top Up (Visa)

Add/reload funds to a Visa prepaid card.

Cash Deposit

Payment Type indicator in a money transfer transaction to be used when funding source is cash

Fast Refund

Mastercard allows for faster disbursements to consumers’ accounts. This field indicates fast refund i.e. the refund will be available in near real-time on the card.

used for the original purchase transaction or to a different card.

Person to Person Bank Initiated

An individual uses an online banking tool to move money from their account to someone else's debit card.

Government Disbursement

Tax refunds are placed onto an individual's debit card.

Online Gambling

Winnings from an online gambling are placed onto an individual's debit card.

Loyalty and Offers

Rebates are sent to an individual's debit card for recent purchases.

Payroll/Pension Disbursements

Transaction initiated from an employer to an employee's debit card.

Money Transfer – Merchant Initiated

An individual uses an online social media tool to pay someone using their debit card.

Agent Cash Out (MC)

Money Send agents assigned to perform cash-out transaction in behalf of the customer.

Cash to ATM (MC)

Add funds through Authorized ATM machines.

Funds Transfer (Visa)

Payment Type Indicator in Money Send Group.

Person to Person Transfer to Card Account

An individual uses wallet transfer tool to move money from their account to someone else's card (P2PCard).

Transfer to Card

Transfer to Own Debit or Prepaid Card Account.

Funding Currency Support

USD

Official Currency of the United States.

GBP Pound Sterling

Common names for the British Pound include the Pound Sterling, Sterling, Quid, Cable and Nicker.

EURO

Official currency of the European Union and its territories.

CAD

Canadian Currency.

Swiss Franc

Switzerland Currency

Swedish Krona

Sweden Currency

Additional Products

TransArmor

Fiserv's dual-layered (tokenization and encryption) payment card security solution that removes sensitive payment card data from merchant environments, reducing the thread and liability associated with a data breach.

Ingenico Onguard Encryption

Open Architecture for Point to Point Encryption for magnetic stripe, EMV, NFC/contactless and manual entry transactions.

Token Initiated Transactions

A transaction that is performed without the card being present, such as a refund or recurring payment. The transaction is "initiated" utilizing the token that was obtained to the PAN.

TransArmor RSA Encryption

Software Based Encryption (RSA/Public Key Infrastructure PKI). The public key resides on the merchant device, while the private key resides within the Fiserv data center. Fiserv provides the 11-digit public key. There are test and production keys. Keys are rotated yearly or every two years to meet or exceed PCI requirements. It is not format-preserving. The encrypted data does not resemble original data and is not put in the Primary Account Number (PAN) field, but is appended at the end of the message.

TransArmor VeriFone Edition Encryption

Hardware Based Encryption by VeriFone that is format preserving, installed at the hardware level and supported by the Advanced Encryption Standard (AES) standards.

TransArmor VeriFone Edition Encryption POSID

A specific Buypass function for clients who do not support unique Terminal ID's on Buypass. A solution to facilitate proper decryption against TAVE's requirement for unique TIDs per device.

TransArmor VeriFone AES DUKPT Encryption

Encryption & Key management.

AES DUKPT (Derived Unique Key per Transaction)

Unique to VeriFone devices. Incorporates the AES cryptographic algorithm to encrypt transaction data with greater security and processing speed than Triple Data Encryption Standard DUKPT (“Triple-DES DUKPT”) –the former standard that is widely deployed by the financial services industry. It provides a much larger set of unique secret keys. Derived Unique Key Per Transaction (DUKPT) allows financial institutions to use the Advanced Encryption Standard (AES) algorithm in a secure and interoperable way to provide confidentiality through encryption of PINs and cardholder data, transaction authentication and much more.

Multi-Pay Token

Refers to a reusable token. The multi-pay token replaces sensitive data with surrogate numbers, matching the format and length of the initiating PAN while sharing the last four digits of the corresponding PAN. Multi-Pay Tokens are card-based, meaning a merchant will always get the same token back for a specific PAN. Allows a merchant to use the token with the processor gateway that holds the token vault to run subsequent transactions such as a recurring payment or a refund. This is done without the need to prompt the customer for his card account number again and without having to store the actual card number.

Purchasing Card

A purchasing card (also abbreviated as PCard or P-Card) is a form of company charge card that allows goods and services to be procured without using a traditional purchasing process. Can also be referred to as procurement cards.

PCARD II

A transaction including additional line-item detail to support business-to-business (B2B) payment processing using corporate cards. Includes additional data elements such as:

- Tax Amount (Between 0.1% and 31% of the total amount)
- Customer Code or PO number
- Merchant Zip Code

PCARD III

A transaction including additional line item detail associated with B2B-heavy industries and/or transactions that involve Government cards. Includes the additional data elements for Level II plus:

- Ship-From Zip Code
- Destination Zip Code
- Invoice Number
- Order Number
- Item Product Code
- Item Commodity Code
- Item Description
- Item Quantity
- Item Unit of Measure
- Item Extended Amount
- Freight Amount
- Duty Amount

Network Tokens

Fiserv Network Tokens

Tokenization Program provisioned by Fiserv to process Card Association EMVCo Network Tokens, which replace a PAN with a token which is merchant specific and payment processor agnostic. Fiserv acts as Token Requestor/Aggregator (via MTRG Merchant Token Requester Gateway) on behalf of the merchant by connecting to multiple Token Service Providers, including Visa, Amex, Discover and MasterCard.

Special Downloads

Mail

The merchant performs an initial file download through a series of AdminRequest messages with Transaction Type FileDownload and the appropriate File Type value. Each successful response will return one file data block.

Host Discount

Total amount of host discounts applied to the financial transactions in shift or business day totals. This is a back office setup that allows discounts to be applied at the pump (Buy one get one free/50 cents off a gallon).

Date/Time Load

Pulls in the current day, month and year to the terminal. Adjustments auto set for Day Light Savings Time.

Table Load

Table – Merchant/Terminal Parameter Table. This load will send merchant specific parameters to the terminal (entitlement information). Mainly used in a petroleum environment.

Receipt Text

Rectxt – This load will send a request to the terminal to retrieve custom text to be printed on all receipts.

Card Tables

A Proprietary Card Configuration Table Merchants configure in Buypass to configure fuel pumps (that is Velocity settings).

Fuel Price

Fuel price at the pump to be downloaded and stored at terminal.

Settlement Transaction Type

Daily Totals Report with Close

Identifies a request for totals for the current settlement date; ends the current settlement date; and rolls the date to the next settlement date.

Daily Totals Report

Identifies a request for totals for the current settlement date.

Shift Totals Report

Shift totals accumulate for each merchant from work shift to work shift. These totals are scratch totals and do not affect settlement.

Bill Payments

Recurring Payments

Charges applied to a cardholder in predetermined intervals for services or goods of an ongoing nature (memberships, subscriptions). Recurring transactions are only applicable for Visa, Mastercard, American Express, Discover (including Diners and JCB Domestic) and PINless Debit transactions.

Single Payments

Payment of the entire principal sum at the end of its duration instead of in monthly installments.

Deferred Payments

Type of payment arrangement that is often in retail settings where a person buys and receives an item with a commitment to begin making payments at a future date.

Installment Payments

Payments towards debt that is generally repaid in equal monthly payments that include interest and a portion of principal.

AMEX Plan N and DPP

This is an American Express Deferred payment program. This program is designed to request American Express to postpone and or divide the payment(s) over a certain period of time. In order for merchants to support Plan N payments, they must also support non-Plan N transactions through Fiserv. The Merchant must have an agreement with American Express to process Plan N transactions.

FSA/HSA/HRA and Transit

A Flexible Spending Account (FSA) (also known as a flexible spending arrangement) is a special account you put pre-tax money into that is used to pay for certain out-of-pocket health care costs. Health Savings Account (HSA) is a tax-advantaged medical savings account available to taxpayers in the United States who are enrolled in a high-deductible health plan (HDHP). The funds contributed to an account are not subject to federal income tax at the time of deposit. A Health Reimbursement Arrangement (HRA), commonly referred to as a health reimbursement account, is an IRS-approved, employer-funded, tax-advantaged employer health benefit plan that reimburses employees for out-of-pocket medical expenses and individual health insurance premiums. Transit Account is a pre-tax benefit account used to pay for public transit – including train, subway, bus, ferry or vanpool – for commuting expenses to and from work.

Transit

A type of Pretax benefit account.

RX/Pharmacy

A sub-category of FSA/HSA/HRA.

Dental

A sub-category of FSA/HSA/HRA.

Co-Payment

A sub-category of FSA/HSA/HRA.

Healthcare

See definitions for HSA and FSA.

Clinical

A sub-category of FSA/HSA/HRA.

Vision

A sub-category of FSA/HSA/HRA.

Debt Repayment

Allows consumers to pay back loan using debit card. Eligible Merchants must enroll in Card Brands' Debt Repayment Program.

Existing Debt Indicator

Allows clients to pass specific debt indicator field through Rapid Connect (specific to Visa) as a payment of an existing debt obligation.

Debit Repayment Group

Allows consumers to pay back loan using debit card in Europe (outside of U.S.).

Transit Debt Recovery

Debt Recovery Transactions are required for clients and operators using contactless aggregation, whereby the third party provider can recover funds for multiple transit trips in which authorizations were declined.

Business Payment Type

Allows consumers to make regular payments to providers and allow merchants to capitalize on specific programs such as Buy Now Pay Later (BNPL).

Consumer Bill Payment Service Provider

CBPS providers streamline the bill payment process by giving consumers one place where they can pay all their bills via card. This platform can be either an app or a website. The consumer makes their bill payments through the CBPS provider, and then the provider takes care of everything with the billing party. Acquirers must register third-party CBPS providers with Visa to participate in the program.

Purchase Repayment

MasterCard Installments is a new buy now, pay later option provided for the MasterCard payments network. The program offers consumers the option to pay for in-person purchases in monthly installments rather than in one lump sum.

Wallet Transfer

Transaction Type

Authorization

A transaction that is used to transmit an authorization request to Fiserv where it is not captured for settlement processing. A subsequent Completion transaction is then submitted to Fiserv to be captured for settlement processing.

Balance Inquiry

A transaction that is used to return the current balance on an active account.

Balance Lock

This transaction will lock the requested amount up to the current available balance for a preset time. One or more locks can be active on a Prepaid Closed Loop card at one time.

Cashout

A transaction that is used to remove the remaining balance from a card. The cash out transaction will bring the account balance to zero.

Cashout Active Status

This transaction is used to remove the remaining balance from the card and the account status stays as active.

Completion

A transaction that is used to submit for settlement a previously approved Authorization or a voice approved transaction. Completion transactions where the merchant receives a Response Code of “000”, must not be resent to Rapid Connect, as that could result in multiple charges to the same card.

Load

This transaction will add value to a Prepaid Closed Loop card and change the status to active when purchasing a card. If the Prepaid Closed Loop card is already active, the value is added to the existing balance of the Prepaid Closed Loop card.

Redemption

A Redemption transaction reduces the balance of an active Prepaid Closed Loop or Open Loop card.

Redemption Unlock

This transaction is performed after a Balance Lock transaction to complete the purchase on a Prepaid Closed Loop card and unlock any remaining balance from the Balance Lock transaction.

Refund

A transaction that is used to credit funds to the account holder.

Reload

This transaction adds value to an already active Prepaid Closed Loop or Open Loop card account.

Sale

A transaction that is used to authorize and capture the amount in one transaction.

Verification

A transaction that is used to determine if a card is active.

Voucher Clear

This is an online force-post entry of a previously voice-authorized SNAP transaction. Entry of the authorization number and the voucher number is required, and the account number is manually entered without PIN data.

Void/Full Reversal

A transaction that is used to cancel or fully reverse a previous transaction.

Partial Reversal

A reversal transaction where the amount is less than the original authorization amount.

Partial Authorization

An authorization response with an approval for a portion of the total amount requested. Partial Authorization support is generally required for all Merchants in card-present environments in order to accommodate cardholder accounts where limited funds may be available (for example Debit or Open Loop Prepaid cards). Additionally, Merchant Aggregators and MOTO Merchants are required to support Partial Authorization approvals. Ecommerce merchants have the option to support Partial Authorization approvals and are strongly encouraged to do so.

Activation

A transaction that is performed when the purchase of a Prepaid Closed Loop or Open Loop card occurs. It adds value and changes the status of the Prepaid Closed Loop or Open Loop card to active.

Incremental Authorization

A request for an additional dollar amount on a prior authorization. An incremental authorization is used when the final amount for a transaction is greater than the dollar amount of the original authorization. Incremental authorizations are common in the lodging industry.

TA Token Request

A non-financial transaction submitted by the merchant/software solely to obtain a token that replaces sensitive values (PAN Data) with non-sensitive token values (a token).

Non-TransArmor Test Cases

Test Cases provided in the project SDK that are not associated with TransArmor encryption or decryption.

Batch Open

This transaction initiates the transfer of a batch from the POS device to the Host.

Batch Settle Detail

A transaction that is used to send Batch Settlement Details to Rapid Connect.

Batch Close

Compass: This transaction is sent upon the successful transmission of the last BatchSettleDetail or BatchSettleL3 transaction for the batch. This transaction indicates the end of the batch.

Change

Compass: A Transaction used to adjust the amount of a previously submitted Check Completion transaction.

Disable Internet Transactions

A transaction used to disable a Prepaid Closed Loop card so that it cannot be used on the Internet.

Fraud Score Only

A transaction to obtain a fraud score without performing an authorization. Fraud Scoring requires the usage of a specific "Fraud Score Indicator" within the Fraud Mitigation Group.

Generate Key

A transaction that is used to generate a merchant specific key that is used in all Prepaid Closed Loop transactions with an extended account number (EAN).

Internet Activation

A transaction used to activate a Prepaid Closed Loop card through the Internet.

Adjustment of Sale

Adjustment transaction cancels the processing associated with a previously approved authorization.
This is a Canadian Void.

Adjustment of Refund

Adjustment transaction cancels the processing associated with a previously approved authorization.

Canada Key Request

A transaction that is used to request a new key for Canadian merchants.

Void of Refund

Voids a refund

PIN Debit Refund

Refund for a Debit with a PIN

EBT Refund

Refunds an EBT transaction

Online Refund

Online refund authorization

Master Session Encryption (HSM)

Key Management scheme in which a pre-shared ‘master encryption key’ is used to encrypt a generated ‘session key’, which is typically randomly generated. The session keys are also referred to as ‘symmetric’ since the same key is used for both encryption and decryption.

MAC DUKPT (Derived Unique Key Per Transaction)

A key management scheme in which for every transaction, a unique key is used which is derived from a fixed key. Therefore, if a derived key is compromised, future and past transaction data are still protected since the next or prior keys cannot be determined easily.

MAC Master Session

Key management scheme in which a pre-shared Key Encrypting Key (called the "Master" key) is used to encrypt a randomly generated and insecurely communicated Working Key (called the "Session" key). The Working Key is then used for encrypting the data to be exchanged.

Estimated Authorization

Used in scenarios when final amount is not known at the time of the authorization. An estimated authorization is typically found in (Travel and Entertainment) environments, where the total charges for the full suite of services rendered is not available at the time of the initial authorization.

Product Eligibility Inquiry

Provides a way to check if a card meets eligibility criteria for premium offers or promotions, Visa only.
