Revision History

Section	Change Log	Version	Date
	Updated company logo per new brand guidelines.	9.02.16	October 22, 2019
1	Updated the following in the Supported Payment and Transaction Types table: Added the following Ecommerce Credit Card features: Apple Pay, Apple Pay On The Web, Samsung Pay, and Google Pay. Added the support of Void / Full Reversal of Refund for Credit, Debit and Prepaid Payment Types. Added the following Note to Payment Type Debit: "*3 This has limited platform availability. For more information, please contact your Account Representative." Updated *3 to *4 for Payment Type Prepaid.	7.10.29	October 23, 2018
1	Removed support of Transaction Type Debit Refund for Timeout Reversal transactions. Removed support of Transaction Type PpayCL Refund for Void/Full Reversal transactions.	7.10.3	November 1, 2017

Chapter 1: Introduction

This reference guide provides an overview on Rapid Connect® processing functionality specific to the restaurant industry. This document is intended to be used in conjunction with the **Universal Message Format specification (UMF)**.

We define the restaurant industry as establishments where meals or refreshments may be purchased. Payments for service in a restaurant customarily allow the customer to include a tip or gratuity, which is over and above the amount for the meal.

Supported Payment and Transaction Types

The following table lists Payment Types supported by Rapid Connect for the Restaurant industry:

Payment Type	Card Types/Features	Transaction Types	Timeout Reversal	Void/Full Reversal
Credit	Visa® Mastercard® American Express® Discover® Network Diners® JCB®	Sale	✓	✓
		Refund	✓	✓
		Authorization	✓	✓
		Completion	✓	
		BatchSettleDetail		
		Verification		
		Balance Inquiry[1]		
Credit	Apple Pay® Apple Pay On The Web® Samsung Pay® Google Pay®	Sale	✓	✓
		Refund	✓	✓
		Authorization	✓	✓
		Completion	✓	
		BatchSettleDetail		
		Verification		

[1] Balance Inquiry is applicable to MasterCard Open Loop Prepaid Cards.

Payment Type	Transaction Types	Timeout Reversal	Void / Full Reversal
Debit	Sale	✓	✓
	Authorization[2]	✓	✓
	Refund		✓[3]
	BatchSettleDetail		
	Balance Inquiry		

Payment Type	Card Types	Transaction Types	Timeout Reversal	Void/Full Reversal
Prepaid	PpayCL (Prepaid Closed Loop)	Activation	✓	✓[4]
		Reload	✓	✓[4]
		Load	✓	✓[4]
		Cashout	✓	✓[4]
		Cashout Active Status	✓	✓[4]
		Redemption	✓	✓[4]
		Redemption Unlock	✓	✓[4]
		Refund	✓	✓
		Balance Inquiry		
		Balance Lock		

[2] Only supported for merchants sending the Settlement Indicator value of 1 or 2 in the transaction.

[3] This has limited platform availability. For more information, please contact your Account Representative

[4] The POS Entry Mode must be 01 for Prepaid Closed Loop Void/Full Reversals

NOTE:
The Account Number in the Void/Full Reversal must be the same Account Number received in the original transaction response.

Chapter 2: Payment Acceptance

Partial Authorization

Partial Authorization is an authorization response to a transaction request with approval for a portion of the total amount requested. Point of sale support of Partial Authorization is mandated by the card associations. Fees for non-compliance with this requirement are regularly applied to merchant transactions that do not support Partial Authorization.

The following facts are critical when processing Partial Authorization transactions:

- The POS device must prompt for a second form of tender for and remaining balance of a Partially Authorized transaction
- If a Cash Back amount is sent in the transaction request, the Partially Authorized response will not include Cash Back. Therefore, Cash Back amounts cannot be included in the final sale amount of the Partially Authorized transaction
- Void/Full Reversal capability is required for Partially Approved transactions. The customer must have the option to not complete the purchase, for example; when only one form of payment is available to the cardholder

Partial Authorization Approval Capability

Partial Authorization Approval Capability is an identifier used to indicate whether or not the terminal/software can support partial authorization approvals

Please refer to the UMF for Partial Authorization Approval Capability field requirements.

Rapid Connect supports the following Transaction Types for Partial Authorization in the Restaurant industry:

Payment Type	Card Types	Applicable Transaction Types
Credit	Visa® Mastercard® American Express® Discover® Network Diners® JCB® (US Domestic)	Authorization Sale
Debit		Authorization[2] Sale
Prepaid	Prepaid Closed Loop (PpayCL)	Redemption Redemption Unlock

[2] Only supported for merchants sending the Settlement Indicator value of 1 or 2 in the transaction.

Tips and Gratuity

For Merchants operating in an industry that accepts tips or gratuities for service, a tolerance between the amount authorized and amount settled (completion) is allowed.

Eligible transaction authorizations are allowed to be completed for up to 20% more than the authorization amount. Any amount over the allowed tolerance for the specific MCC must be authorized as a separate transaction.

Several of the Interchange Qualification tiers allow for Restaurant MCC's to be exempt from tolerance altogether.

Restaurant MCC:

- 5812 Eating Places and Restaurants

Similar MCC's:

- 5811 Caterers/Food Preparation
- 5813 Drinking Places (Bars, Taverns, Nightclubs, Cocktail Lounges)

Other MCC's that accept tips, such as T&E Merchants, may also be allowed a tolerance of 10-20%.

Merchants can determine with their Account Representative if a variance for tips or gratuities are applicable to their assigned Merchant MCC code

Track Data Storage

Regulatory requirements state that the merchant device must not store full magnetic stripe data, including track data. For Debit, EBT Cash, and EBT SNAP, in addition to the track and data storage prohibition, the merchant device must also not store PIN block data.

Please refer to the UMF for Track Data requirements.

2.1 Credit Card

Credit Cards enable a Cardholder to obtain goods, services, or cash by accessing a line of credit.

Below are examples of various types of Credit Cards and their purpose.

Business Card: Either Credit or Debit card issued to a small business that can be used for various business related expenses such as travel, entertainment, supplies, equipment, and advertising.

- **Commercial Card:** Designed for business-to-business transactions
- **Prepaid Card:** Single use or Reloadable. Allows Cardholders to spend up to the amount funded on the Card Account
- **Purchase Card:** Credit card issued to employees of a corporate customer. The card is used for purchasing business related supplies and services
- **Reward Card:** Credit card that enables a Cardholder to earn benefits, based on their qualifying purchases
- **Signature Debit:** Linked to a Cardholder's checking or savings account as opposed to a line of credit
- **Unembossed Card:** A branded card with no raised numbers that promotes the electronic processing of transactions

Chargeback Risk Reduction

For hand keyed transactions, an imprint of the front of the card (raised numbers and text) and the cardholder's signature is required at the time of sale. This helps protect the merchant from potential chargebacks.

AVS

Address Verification Service (AVS) is a feature that also helps reduce chargebacks, as well as fraudulent use of lost or stolen cards. AVS is supported for Visa, MasterCard, American Express and Discover (including Diners and JCB (US Domestic). The AVS Result Code is the response resulting from checking the cardholder's postal code, and any additional address information provided, against the Issuer's system of record.

If the AVS Result Code was provided in the initial transaction response, it must be included with the transaction completion. The AVS Result Code does not directly impact an approved or declined transaction response, however should be considered for payment acceptance by the merchant. Transactions with a missing or invalid address match will downgrade.

Please refer to the UMF for the description and value sets for AVS Result Code.

Contactless Payment

Contactless Payments are similar to traditional card payments except that they are transmitted by a radio frequency (RF) antenna embedded within a plastic card. Contactless Payments work with equipment or terminals equipped with an RFID (Radio Frequency Identification) reader. The card wirelessly transmits Track 1 and/or Track 2 payment details to the terminal when tapped or waved near the contactless card reader.

Discounts, Fees and Fines

Merchants can obtain an explanation of Discount, Fees or Fines by calling the Customer Service phone number on their monthly merchant statement.

- **Interchange Discount fees** are assessed on Credit and Non-PIN Debit (Signature) transactions. The fees collected may be a percentage of the transaction, a flat amount per transaction, or a combination of the two

Fees collected by the merchant's payment processing provider are paid to the card associations, issuing banks, and depending on merchant agreement, payment processor

- **Association Fees** are those billed by the card associations (Visa, MasterCard, Discover, American Express and so on) and vary
- **Compliance Fines** can be assessed by Fiserv or the Card Associations when a merchant is not following rules, regulations and mandates for their payment card acceptance practices

Interchange Fees

Interchange fees vary based upon a complex series of interchange levels and depend upon a number of factors, such as:

- The type of credit card being presented
- Transaction information included in request and completion
- How and/or when the transaction is processed
- The merchants industry
- Other factors

Below are examples of some factors that affect Interchange for Restaurant merchants:

Better Qualification	Downgrade Reason
Settlement within one day of the transaction	Settlement greater than two days
Valid Electronic Authorization (one per Authorization)	No Authorization
Validation Code/Tran ID present in Completion	Missing Validation Code/Tran ID in Completion
Card Present Indicator (Swiped, Contactless)	Key entered (Manual)
Full Track I or II	Partial Track Data

Association Fees and Compliance Fines

All merchants will pay Association Fees. There are factors that influence these assessments that result in higher or lower fees. Compliance Fines are incurred when payment applications or merchant business practices do not meet requirements and mandates.

Example of Several Factors Contributing to Higher Association Fees or Compliance Fines:

- No offsetting transaction: Merchants are assessed a fine for each authorization request that is not settled or reversed within the same business day
- Downgraded interchange: Transactions subject to downgraded interchange may be subject to higher Association fees
- Not enabled for Partial Authorization. Fines occur when merchants are not using a payment application in compliance with Partial Authorization mandates

2.2 PIN Debit Card

Debit Cards are linked to a cardholder's funded account, such as a checking or savings account.

This is different from Credit Cards, which are linked to a line of credit.

Below are other facts about Debit Cards:

- PIN entry is required for all PIN Debit requests at the Point of Sale, except Time out Reversals
- Rapid Connect supports Void/Full Reversals for PIN Debit Cards
  - Merchants must have a contractual agreement with their bank alliance to support Debit Voids/Full Reversal prior to implementation of this payment feature
- Rapid Connect supports Refund transactions for PIN Debit Cards
  - Debit Refund transactions do not support Cash Back amounts
  - Merchant policies regarding Debit cards may or may not support Refunds on Debit cards
  - Merchants must have a contractual agreement with their bank alliance to support Refunds on Debit Cards prior to implementation of this payment feature
- PIN Debit Cards issued with a Visa or MasterCard Logo may support Signature Debit transactions where no PIN is required (may be referred to as "Check Cards")

- In Rapid Connect, transactions occurring on this type of card (no pin) would be processed as a Credit Card transaction

2.3 Prepaid Closed Loop Card

Closed loop prepaid solutions are designed to be used only at the issuer's locations. Examples of closed loop issuers include retail stores, casinos, oil companies, e-commerce businesses, telecommunications companies, and restaurants.

Exact specifications and allowed POS transactions should be determined with the client operating the prepaid program. This should be done prior to project submission, testing and certification with Fiserv.

Note: Prepaid Closed Loop Void/Full Reversal Transactions where the POS Entry Mode 90 or 91 was sent on the original transaction must be sent with the POS Entry Mode 01 using the account number received in the original Authorization response

Chapter 3: Receipt Requirements

3.1 Retention

Merchants must retain receipts for transactions.

Retention timeframes:

- For Visa and MasterCard, 18 months
- For American Express, two years
- Discover and related cards, three years
- Debit, two years
- Prepaid - contact card issuer for details

Merchants with specific questions regarding receipt retention or receipt requirements may contact their Account Representative for more information.

3.2 Receipt Fields

The fields below are required for one or more card associations, unless noted otherwise.

Basic Credit/Debit – Receipt Fields	Descriptions	Credit Card Only
Merchant Name	DBA name	
MID/TID	MID/TID - optional, but recommended	
Merchant Address	Street Address, City, State, Postal Code	
Merchant Country	If non-US	
Transaction Date and Time	Local Date and Time of the Transaction	
Account Number or ID	Truncate all but the last 4 digits for Credit and Debit cards	
Receipt Number/Sequence Number	Created by Merchant/POS	
Transaction Type	As in Sale, Authorization, Refund, Void and so on	
Payment Type	Credit, Debit, EBT and so on	
Card Type	Visa, MasterCard, American Express, Discover and so on	⊗
Result – Approved/Declined	Response will indicate Approval or reason for Decline	
Authorization ID	If approved, this value is present in the response from host/issuer	⊗
Brief description with price	That is Meal, Tax, Subtotal, Tip, Total and amount of each	

Basic Credit/Debit – Receipt Fields	Descriptions	Credit Card Only
Cash Over Amount	Credit card, required for Discover only. Debit card, referred to as Cash Back (see Amount by Function below).	
Total Transaction Amount	With currency symbol	

Cardholder Signature Line	On Merchant Copy
	• Not required for No Signature Required programs, that is
	  • MC QPS
	  • Visa Small Ticket/Easy Pay
	  • Discover No Signature
	  • AMEX under $25
		⊗

Customer (Cardholder) Name	On manual entry only; unless prohibited by law	
Balance	If provided in response	
Transaction Receipt Legend	Stating 'Merchant copy' or 'Customer copy'	
Terms & Conditions of Sale	If the merchant has conditions, such as a no refund policy, then "No Refunds" must be printed on the receipt	
Credit Card Customer Copy Wording	Customer Copy - Retain this copy for statement validation	
Credit Card Merchant Copy Wording	"The Issuer of the Card identified on this item is authorized to pay the amount shown as 'total' upon proper presentation. I promise to pay such total (together with any other charges due thereon) subject to and in accordance with the agreement governing the use of such Card."	
Original Sale Date	Date returned item was sold to the customer	
Reason for the refund	Return or adjustment on goods or services sold	
Merchant Copy Wording	"I request that the above Cardholder account be credited with the amount shown as 'total' because of the return of, or adjustments on, the goods, services, or other items of value described, and authorize the bank to which this credit slip is delivered to charge my account in accordance with my agreement with such bank."	
Merchant signature	Merchant Copy	

PIN Debit – Additional Receipt Fields	Descriptions
PIN Debit – Amount by function	That is. Purchase, Cash back
PIN Debit – Fees assessed	

Prepaid Closed Loop receipt requirements are based on best practices.

Developers should contact the client/card issuer to determine if any fields are optional, or if additional fields are required for a specific client program.

Prepaid Closed Loop – Receipt Fields	Descriptions
Merchant Name	DBA Name
MID/TID	Prepaid Merchant and Terminal ID
Merchant Address	Street Address, City, State and Zip
Merchant Phone Number	Phone Number of the Merchant
Payment Type	Stored Value Card
Transaction Type	Activation, Reload, Redemption, Balance Inquiry
Transaction Date/Time	Local Date and Time of the Transaction
Receipt Number/Sequence Number	Created by Merchant/POS
Account Number or ID	Truncate only the last 4 digits
Result – Approved/Declined	Code will indicate reason for Approve/Decline and so on
Authorization ID	If approved
Brief Description of goods/services with price	That is Merchandise, Tax and so on
Total Transaction Amount	Total Transaction Amount
Balance	If provided in response
