Revision History

Section	Change Log	Version	Date
1	Removed the following EBT Cash Transaction Types "Sale (with or without Cash Back)" and "Authorization (with or without Cash Back)." Added the following EBT Cash Transaction Types: "Sale (with Cash Back)", "Sale (without Cash Back)", Authorization (with Cash Back) and "Authorization (without Cash Back)" Updated the Void/Full Reversal column for Authorization and Refund transactions of EBT SNAP Payment Type. Added the following notation: "*3 This has limited platform availability. For more information, please contact your Account Representative."	10.02.9	March 26, 2021
	Updated the Version and Date to 10.02.7 and October 21, 2020.	10.02.7	October 21, 2020
	Updated the Copyright to 2020 throughout this document.	10.02.7	October 21, 2020
1	Added the Program Identifier column for the Payment Type Giftcard.	10.02.7	October 21, 2020
1	Updated the Card Type to GiftCard for the Payment Type Prepaid.	10.02.7	October 21, 2020
	Updated company logo per new brand guidelines.	9.02.16	October 22, 2019

Chapter 1: Introduction

This reference guide provides an overview on Rapid Connect processing functionality for the Retail and Quick Service Restaurant (QSR) industries. This document is intended to be used in conjunction with the **Universal Message Format Specification (UMF)**.

We define the Retail industry as businesses selling merchandise or services directly to customers. QSR's are fast food restaurants which provide food and/or beverages for purchase. These industries operate similarly in that they involve face-to-face exchanges where the payment by card, check and so on, is physically present with the customer and typically transactions do not allow for a tip or gratuity. Service related merchants may also support recurring payments.

Merchandising Examples:	Service Examples:
Sporting Goods Stores	Insurance Companies
Home Improvement Stores	Legal Services
Package Stores	Amusement Parks
Department Stores	Recreational Leagues
Fast Food Restaurants	Automobile Repair

Supported Payment and Transaction Types

The following table lists Payment Types supported by Rapid Connect for the Retail and Quick Service Restaurant (QSR) industries:

Payment Type	Card Types/Features	Transaction Types	Timeout Reversal	Void/Full Reversal
Credit	Visa® Mastercard® American Express® Discover® Network Diners® JCB®	Sale	✓	✓
		Refund	✓	✓
		Authorization	✓	✓
		Completion	✓	
		Verification		
		Balance Inquiry*[1]		

*[1] Balance Inquiry is applicable to Mastercard Open Loop Prepaid Cards.

Payment Type	Card Types/Features	Transaction Types	Timeout Reversal	Void/Full Reversal
Credit	Apple Pay® Apple Pay on The Web® Samsung Pay® Google Pay®	Authorization	✓	✓
		Completion	✓	
		Sale	✓	✓
		Refund	✓	✓

		Completion	✓	✓
		Sale	✓	✓
		Refund		✓ *5

*5 Only applicable to transactions when the Authorizing Network ID value is 12 and the BIN is either 524303 or 604593.

Chapter 2: Payment Acceptance

Partial Authorization

Partial Authorization is an authorization response to a transaction request with approval for a portion of the total amount requested. Point of sale support of Partial Authorization is mandated by the card associations. Fees for non-compliance with this requirement are regularly applied to merchant transactions that do not support Partial Authorization.

The following facts are critical when processing Partial Authorization transactions:

- The POS device must prompt for a second form of tender for and remaining balance of a Partially Authorized transaction
- If a Cash Back amount is sent in the transaction request, the Partially Authorized response will not include Cash Back. Therefore, Cash Back amounts cannot be included in the final sale amount of the Partially Authorized transaction
- Void/Full Reversal capability is required for Partially Approved transactions. The customer must have the option to not complete the purchase, for example; when only one form of payment is available to the cardholder

Partial Authorization Approval Capability

Partial Authorization Approval Capability is an identifier used to indicate whether or not the terminal/software can support partial authorization approvals.

Please Refer to the UMF for Partial Authorization Approval Capability Field requirements.

Rapid Connect supports the following Transaction Types for Partial Authorization in the Retail and Quick Service Restaurant (QSR) industries:

Payment Type	Card Types	Applicable Transaction Types
Credit	Visa® Mastercard® American Express® Discover® Network Diners® JCB® (US Domestic)	Authorization Sale
Debit		Authorization Sale
Prepaid	Prepaid Closed Loop (PpayCL)	Redemption Redemption Unlock

Track Data Storage

Regulatory requirements regarding data storage mandate that the merchant device must not store full magnetic stripe data, including track data. For Debit, EBT Cash and EBT SNAP, in addition to the track and data storage prohibition, the merchant device must also not store PIN block data.

Please Refer to the UMF for Track Data Requirements.

Flexible Spending and Healthcare Reimbursement Account programs

Flexible Spending and Healthcare Reimbursement Account programs allow cardholders to access pre-funded accounts for eligible expenses at the Point of Sale. Merchants who choose to accept cards issued for these programs must meet certain requirements; eligible MCC, SIGIS membership and certification, ongoing transaction support using an inventory information approval system (IIAS) or meet criteria for the IRS 90 percent rule.

For Healthcare related purchases, the IRS rules state that use of an FSA/HRA card is limited to merchants and service providers with specific merchant category codes (MCC) related to health care. These include physicians, dentists, vision care providers, hospitals and other medical care providers. For Transit, merchants must use an eligible MCC for Transit related FSA card transactions.

FSA/HRA programs vary depending on the FSA/HRA program administrator. Cards can be used at merchants or service providers that do not have health care related merchant category codes including supermarkets, grocery stores, discount stores and wholesale clubs provided that the merchant uses an Inventory Information Approval System (IIAS). Pharmacies are not considered to be health care related exclusively and therefore must either use an IIAS or qualify as 90 percent rule to accept eligible FSA/HRA cards.

An inventory information approval system (IIAS) requires a merchant's inventory and point-of-sale systems to have the ability to verify that the merchandise being purchased with an eligible FSA/HRA card is an eligible expense, as defined by the IRS. 90 percent Rule merchants are those that have certified 90 percent or more of their sales are for FSA/HRA eligible items.

For more information on IIAS, 90 percent Rule and SIGIS, please visit sig-is.org/

2.1 Credit Card

Below are examples of various features of Credit Cards and descriptions.

Dynamic Currency Conversion (DCC)

Dynamic Currency Conversion is a program that allows Merchants to offer their customers the ability to pay for purchases in the customers' native currency.

- Attracts more foreign consumers and can increase sales
- DCC provides revenue to the Merchant that would otherwise be earned by the card associations and issuers

DCC transactions can reduce the rate of chargebacks, since DCC transactions are settled in the consumer's native currency.

- The total amount of the transaction is approved by the customer at the point of sale, making DCC transactions easily recognizable to the cardholder
- The amount billed on the cardholder statement will match the transaction receipts

If a Chargeback should still occur, DCC eliminates the risk of currency fluctuations that could adversely affect the merchant. The rate of exchange at the time of acceptance is guaranteed for the duration of the transaction, including a chargeback of that transaction.

AVS

Address Verification Service (AVS) is a feature that also helps reduce chargebacks, as well as fraudulent use of lost or stolen cards. AVS is supported for Visa, Mastercard, American Express and Discover (including Diners and JCB (U.S. Domestic). The AVS Result Code is the response resulting from checking the cardholder's postal code and any additional address information provided, against the Issuer's system of record. If the AVS Result Code was provided in the initial transaction response, it must be included with the transaction completion. The AVS Result Code does not directly impact an approved or declined transaction response, however should be considered for payment acceptance by the merchant. Transactions with a missing or invalid address match will downgrade.

CCV

CVV2, CVC2 and CID (referred to in Rapid Connect as CCV Data) are, Visa, Mastercard, American Express and Discover card verification tools designed to reduce fraud losses. With the exception of American Express, this is a three character value printed on the back of the card in the signature panel, after the card number. For American Express, it is a four character value printed on the face of the card.

Please Refer to the UMF for the Description and Value Sets for CCV and AVS Result Code.

Contactless Payment

Contactless Payment is similar to traditional swipe card payment, except information is transmitted by a radio frequency (RF) antenna embedded within a plastic card. Contactless Payment works with point of sale equipment or terminals equipped with an RFID (Radio Frequency Identification) reader. The card wirelessly transmits Track 1 and/or Track 2 payment details to the terminal when tapped or waved near the contactless card reader.

Discounts, Fees and Fines

For Fiserv merchants, explanations of fees and fines are available to merchants in their Merchant Operating Guide, Merchant Application or Processing Agreement or by calling the Customer Service phone number on their monthly merchant statement.

- **Interchange Discount fees** are assessed on Credit and Non-PIN Debit (Signature) transactions. The fees collected may be a percentage of the transaction, a flat amount per transaction or a combination of the two
  - Fees collected by the merchant's payment processing provider are paid to the card associations, issuing banks and depending on merchant agreement, payment processor
- **Association Fees** are those billed by the card associations (Visa, Mastercard, Discover, American Express and so on) and vary
- **Compliance Fines** can be assessed by Fiserv or the Card Associations when a merchant is not following rules, regulations and mandates for their payment card acceptance practices

Interchange Fees

Interchange fees vary based upon a complex series of interchange levels and depend upon a number of factors, such as:

- The type of credit card being presented
- Transaction information included in request and completion
- How and/or when the transaction is processed
- The Merchants industry
- Other factors

Some of these factors can be influenced by the merchant and payment application, others cannot.

Below Are Examples of Factors Which Can be Influenced by the Merchant and/or Payment Application:

Better Qualification	Downgrade Reason
Settlement within the same business day	Settlement greater than two days
Valid Electronic Authorization	No authorization
Validation Code/Tran ID present	Missing Validation Code/Tran ID
Card Present (Swiped, Contactless)	Key entered (Manual)
Authorized and Settlement amount match	Settled and Authorized amounts do not match

Association Fees and Compliance Fines

All merchants will pay Association Fees, but there are factors that influence these assessments that can result in higher or lower fees. In addition, Compliance Fines are incurred when payment applications or merchant business practices do not meet requirements and mandates.

Example of Several Factors Contributing to Higher Association Fees or Compliance Fines:

- No offsetting transaction: Merchants are assessed a fine for each approved authorization request that is not settled or reversed
- Downgraded interchange: Transactions subject to downgraded interchange may also be subject to higher Association fees
- Not enabled for Partial Authorization: Fines occur when merchants are not using a payment application in compliance with Partial Authorization mandates

Chargeback Risk Reduction

For hand keyed transactions, an imprint of the front of the card (raised numbers and text) and the cardholder's signature is required at the time of sale. This helps protect the merchant from potential chargebacks.

2.2 PIN Debit Card

PIN entry is required for all PIN Debit requests at the Point of Sale, except Time Out Reversals and Voids.

Rapid Connect supports Void/Full Reversals for PIN Debit Sale and Authorization Transactions.

- Merchants must have a contractual agreement with their bank alliance to support Debit Voids/Full Reversal in order to implement this payment feature

Rapid Connect supports Refund transactions for PIN Debit Cards.

- Debit Refund transactions do not support Cash Back amounts
- Merchant policies regarding Debit cards may or may not support Refunds on Debit cards

PIN Debit Cards may support Signature Debit transactions where no PIN is required (may be referred to as "Check Cards").

- In Rapid Connect, transactions occurring on this type of card (no pin) would be processed as a Credit Card transaction
- This is not the same as PINless POS Debit, which is discussed further on the following page

2.3 PINless POS Debit

PINless POS Debit is an optional payment feature which allows certain 'traditional PIN' transactions to be processed without a PIN. PINless POS Debit provides additional routing options for Card Present Merchants without a PIN Pad. The Point of Sale will include the PINless POS Debit Flag in the Credit request message. If the transaction was approved as a Debit transaction, Fiserv will send back the transaction response as being processed as Debit.

PINLess POS Debit is supported in the following transactions:

- Authorization sent by a terminal capture merchant as a Credit Authorization and approved as Debit Authorization*[2]
- Sale sent by a host capture merchant as a Credit Sale and approved as Debit Sale
- Refund sent by a host capture merchant as a Credit Refund and approved as Debit Refund

PINLess POS Debit is Not supported in the following scenarios:

- Manually keyed transactions
- Cash Back
- Automated Fuel Dispensers
- Transactions where the final amount is not known (restaurants, hotels, car rental)

Void procedures will follow the payment type that was used for the original Authorization and Sale transaction.

- If approved as Debit, must be processed as Debit in the Void transaction
- If approved as Credit, must be processed as Credit in the Void transaction

*[2] Only supported for merchants sending the Settlement Indicator value of 1 or 2 in the transaction.

2.4 EBT Card

Rapid Connect supports EBT Cash Benefits and EBT Food Benefits/SNAP.

EBT stands for Electronic Benefit Transaction. State and county agencies issue cash benefits for various needs.

EBT Cash Benefits

EBT Cash benefits can be spent like cash wherever EBT payments are accepted. EBT Cash transactions must be electronically entered (Swiped). Manual key entry is not supported.

EBT Food Benefits/SNAP

EBT Food Benefits/SNAP, stands for Supplemental Nutrition Assistance Program. Merchants accepting SNAP must register with the Food and Nutrition Services program prior to implementing SNAP card acceptance. SNAP does not support Cash Back to participants.

eWIC

eWIC stands for Women Infants and Children. Merchants accepting eWIC must follow the vendor registration process for their State prior to implementing eWIC acceptance. eWIC does not support Cash Back to participants.

2.5 Prepaid Card

Prepaid Closed Loop

Fiserv Prepaid Closed Loop solutions are designed to be used only within the issuers' network of locations.

Examples of closed loop issuers include retail stores, casinos, oil companies, telecommunications companies and restaurants.

The exact specifications and allowed POS transactions should be determined with the client operating the prepaid program prior to project submission, testing and certification with Fiserv.

Note: Prepaid Closed Loop Void/Full Reversal Transactions where the POS Entry Mode 90 or 91 was sent on the original transaction must be sent with the POS Entry Mode 01 using the account number received in the original Authorization response.

Generic Prepaid

Rapid Connect supports Pont of Sale transactions with multiple prepaid card programs including Stored Value Systems, prepaid resellers such as Blackhawk and InComm, as well as Solspark/Everywhere Gift Card, an Open Loop Prepaid program.

Prepaid resellers have relationships with many prepaid card issuers and merchant retailers, which use merchandising displays for customers to easily select prepaid cards. Cards are activated at the merchant retailer point of sale and then work much like a prepaid closed loop card for merchant specific programs or as open loop prepaid for cards that carry the acquirer brand.

2.6 Private Label

Rapid Connect supports Private Label payments on Generic Proprietary card transactions. Private Label cards work much like a Credit card and are only eligible for purchases made at merchants that support Generic Proprietary cards.

Private Label programs are unique and clients that wish to implement a Private Label program should consult a GPM representative.

2.7 Checks

Rapid Connect supports check transactions for Certegy and TeleCheck, for Paper check processing; TeleCheck ECA for Electronic Check Acceptance® processing.

Merchants must establish an account with their check service provider prior to implementing check acceptance.

TeleCheck ECA®

The TeleCheck Electronic Check Acceptance (ECA) service converts a paper check into an electronic item at the point of sale. TeleCheck ECA checks are authorized through a specially-designed, secure TeleCheck system that captures banking information and the amount of the check. The check-writers' signature is required on approved ECA transactions, authorizing TeleCheck to electronically present the check to the check-writers' financial institution and deposit funds to the merchants' account. TeleCheck ECA allows the merchant to obtain an authorization immediately and then return the check and a transaction receipt to the check-writer at the point of sale.

Rapid Connect supports Sale and Void transactions for TeleCheck ECA, including MICR only and MICR with Dual ID. Depending on the merchant agreement with TeleCheck, the MICR only or Dual ID will be required for electronic check processing. MICR only processing relies on the electronic capture of the check MICR. In addition to electronically capturing the MICR, Dual ID processing also captures check-writer information from a State or Government issued form of Identification.

Not all checks will be ECA approved. Some checks will be approved as paper only. When a paper approval is received, electronic conversion has not taken place and the merchant must deposit the check for payment.

TeleCheck ECA transactions do not support manually entered MICR data. Manually keyed check transactions for Authorization require the merchant to deposit the check for payment.

TeleCheck Paper

TeleCheck Verification and Warranty processing enable merchants to make an informed decision on whether to accept a check from a customer. Rapid Connect supports Authorization transactions for TeleCheck Paper check processing.

Services available:

- **Warranty:** Provides the Merchant a reimbursement up to the check warranty maximum, if all warranty requirements have been met
- **Verification:** Utilizes proprietary risk management tools to determine the risk of accepting a particular check

Certegy

Rapid Connect supports Authorization transactions for Certegy paper check processing.

Chapter 3: Receipt Requirements

3.1 Retention

Merchants must retain receipts for transactions.

Receipt Retention timeframes:

- Visa and Mastercard, five years for FSA/Healthcare related and 13 months all others
- Discover, Diners and JCB (U.S. Domestic), three years
- American Express, two years
- Debit and EBT, two years
- Prepaid – contact card issuer for details
- Private Label – contact the card issuer for details

Merchants with specific questions regarding receipt retention or receipt requirements may contact their Account Representative for more information.

3.2 Receipt Fields

The fields below are required for one or more card associations, unless noted otherwise.

Basic Credit/Debit – Receipt Fields	Descriptions	Credit Card Only
Merchant Name	DBA Name	
MID/TID	MID/TID – Optional, but recommended	
Merchant Address	Street Address, City, State, Postal Code	
Merchant Country	If non-U.S.	
Transaction Date and Time	Local Date and Time of the Transaction	
Account Number or ID	Truncate all but the last four digits for Credit and Debit cards	
Receipt Number/ Sequence Number	Created by Merchant/POS	
Transaction Type	As in Sale, Authorization, Refund, Void and so on	
Payment Type	Credit, Debit, EBT and so on	
Card Type	Visa, Mastercard, American Express, Discover and so on	
Result – Approved/Declined	Response will indicate Approval or reason for Decline	
Authorization ID	If approved, this value is present in the response from host/issuer	
Brief description with price	That is Merchandise, Tax and amount of each	
Cash Over Amount	Credit card, required for Discover only. Debit card, referred to as Cash Back (see Amount by Function below)	
Total Transaction Amount	With currency symbol	

Basic Credit/Debit – Receipt Fields	Descriptions	Credit Card Only

Cardholder Signature Line	On Merchant Copy
	• Not required for No Signature Required programs that is,
	  • MC QPS
	  • Visa Small Ticket/Easy Pay
	  • Discover No Signature
	  • AMEX under $25
		⊗

Cardholder Name	On manual entry only; unless prohibited by law	⊗
Balance	If provided in response	⊗
Transaction Receipt Legend	Must state "Merchant copy" or "Customer copy"	⊗
Terms and Conditions of Sale	If the merchant has conditions, such as a no refund policy, then "No Refunds" must be printed on the receipt	⊗
Credit Card Customer Copy Wording	Customer Copy – Retain this copy for statement validation	⊗
Credit Card Merchant Copy Wording	"The Issuer of the Card identified on this item is authorized to pay the amount shown as 'total' upon proper presentation. I promise to pay such total (together with any other charges due thereon) subject to and in accordance with the agreement governing the use of such Card"	⊗

Credit Card Refund – Additional Receipt Fields	Descriptions	Credit Only
Original Sale Date	Date returned item was sold to the customer	⊗
Reason for the Refund	Return or adjustment on goods or services sold	⊗
Merchant Copy Wording	"I request that the above Cardholder account be credited with the amount shown as 'total' because of the return of or adjustments on, the goods, services or other items of value described and authorize the bank to which this credit slip is delivered to charge my account in accordance with my agreement with such bank"	⊗
Customer Signature	Merchant Copy	⊗

PIN Debit – Additional Receipt Fields	Descriptions
PIN Debit – Amount by Function	That is, Purchase, Cash back
PIN Debit – Fees Assessed	If applicable

EBT – Receipt Fields	Descriptions
Merchant Name	DBA Name
Merchant Address	Street address, City, State and Postal Code
Transaction Date/Time	Local Date and Time of the Transaction
Total Transaction Amount	With currency
Result – Approved/Declined	Code will indicate reason for Approve/Decline and so on
Response Code Description	If declined
Transaction Type	As in Sale, Authorization, Refund, Void and so on
Account Number or ID	Truncate all but the last four digits for EBT cards
Balance	If provided in response

Prepaid Closed Loop receipt requirements are based on best practices.

Developers should contact the client/card issuer to determine if any fields are optional or if additional fields are required for a specific client program.

Prepaid Closed Loop – Receipt Fields	Descriptions
Merchant Name	DBA Name
MID/TID	Prepaid Merchant and Terminal ID
Merchant Address	Street Address, City, State and Zip
Merchant Phone Number	Phone Number of the Merchant
Payment Type	Stored Value Card
Transaction Type	Activation, Reload, Redemption and Balance Inquiry
Transaction Date/Time	Local Date and Time of the Transaction

Prepaid Closed Loop – Receipt Fields	Descriptions
Receipt Number/Sequence Number	Created by Merchant/POS
Account Number or ID	Truncate only the last four digits
Result – Approved/Declined	Code will indicate reason for Approve/Decline and so on
Authorization ID	If approved
Brief Description of Goods or Services With Price	That is, Merchandise, Tax and so on
Total Transaction Amount	Total Transaction Amount
Balance	If provided in response

TeleCheck receipt requirements are based on best practices.

Merchants may contact their Account Representative with any additional questions.

TeleCheck Paper – Receipt Fields	Descriptions
Merchant Name	DBA Name
Merchant Address	Street Address, City, State and Zip
Merchant Phone Number	Telephone Number of the Merchant
Payment Type	Check
Transaction Type	Authorization
Transaction Date/Time	Local Date and Time of the Transaction
Receipt Number/Sequence Number	Created by Merchant/POS
Result – Approved/Declined	Code will indicate reason for Approve/Decline and so on
Authorization/Approval Code	If Approved
Brief Description of Goods/Services With Price	That is Merchandise, Tax and so on
Total Transaction Amount	With currency

TeleCheck ECA – Receipt Fields	Descriptions
Merchant Name	DBA Name
Merchant Address	Street Address, City, State and Zip
Merchant Telephone Number	Telephone Number of the Merchant
Terminal ID	Identifies the register or lane number where the transaction occurred
TeleCheck Merchant ID	Unique to each location, TeleCheck assigned
Date and Time Stamp	Date and time of the transaction
Merchant Trace ID	Billing Control Number (BCN); Merchant-generated transaction identifier
TeleCheck Trace ID	TeleCheck issued, 22 digit
TeleCheck Approval Code	TeleCheck issued, four-digit code
Total Check Amount	Total dollar amount of the sale transaction
Response Check Number	Field is provided if the transaction is approved, declined or referred
Authorization Language Allowing the Electronic Debit of the Check	Specified by TeleCheck
Return Check Fee Amount and note	May provide additional information and state-specific return check fees
Line for Customer Signature	Merchant copy only
