## Rapid Connect

# Disclaimer

Please check with your Fiserv Integrated Partner Management team (IPM) before attempting to implement the features described in this specification. For future upgrades or general concerns, please contact your Relationship Manager. Fiserv Merchant Services Corporation reserves the right to make changes to specifications at any time and without notice. The information furnished in this publication is believed to be accurate and reliable; however, no responsibility is assumed by Fiserv Merchant Services Corporation for its use.

# Revision History

| Section | Change Log | Version | Date |
|---|---|---|---|
| 1 | Corrected minor misalignment between two documents version 10.02.16.<br>Reinstated all changes made October 27, 2021 (lines 2, 3) onto the rebranded version. | 12.04.2 | July 26, 2022 |
| 2 | Removed TimeOut Reversal Testing section and TOR test card numbers table. | 10.02.16 | February 23, 2022 |
| 3 | Added the following note: "'Certification script' refers to 'mandatory tab' from SDK test script. 'Unit test scripts' refers to 'non mandatory tab' from SDK test script."<br>Added note under development section "All test cases from mandatory tab must receive 'pass' scores before moving the project to next phase, unless noted otherwise by cert analyst."<br>Moved statements from Certification stage under Development Stage<br>"•The number of test cases you receive will depend upon your individual project parameters.<br>•We recommend that you test every script, and make adjustments where necessary, so all test scripts are passing before moving to the Certification stage."<br>Added note under Time-out reversal section: "These cases are for your internal unattended testing for developing TOR message format.<br>There will be a final attended TOR test with cert analyst using test cases and various scenarios from certification script." | 10.02.15 | October 27, 2021 |
| 4 | Removed 2017 Message on test cases. Removed 72-hr timeframe on test cases. Re-worded the "Congratulations" message and components within each stage of the RC process (Review: Moved Receipt Requirements. Moved TOR to Development phase from Certification phase) | 10.02.15 | October 27, 2021 |
| 5 | Removed the following verbiage: "If you have questions on how to use the Rapid Connect Website please contact the Rapid Connect Help Desk at 855-869-2066 for assistance." | 10.02.14 | August 25, 2021 |
| 6 | Removed the following verbiage: "If you have questions on how to use the Software Development Kit contents please contact the Rapid Connect Help Desk at 855-869-2066 for assistance." | 10.02.14 | August 25, 2021 |
| 7 | Added the 'Time-Out Reversal Testing' section. | 10.02.8 | February 24, 2021 |
| 8 | Updated Company logo per brand guidelines. | 9.02.16 | October 22, 2019 |

# Start Here Document

## Congratulations! You are now ready to start development on your active Rapid Connect project. This document will help you familiarize yourself with the overall Rapid Connect process and Software Development Kit (SDK) components.

### Your Rapid Connect Project Lifecycle

If you have received this document, then so far you have created your Project Profile, which you have submitted, and which has been activated by the Rapid Connect team.  Each “Active” project has 5 stages.

1. Development
2. Certification
3. Review
4. Accepted
5. Complete – Merchants/locations can begin the boarding process at this stage*

## Development Stage

This is the first stage of your Active application certification. Your customized Software Development Kit (SDK) is created based on your project profile*. Please use the SDK components, explained in more detail below, to develop your payment application and perform transaction testing within the Rapid Connect Sandbox. If application issues arise during your testing in the development stage, you must make corrections and continue to test, correct, and re-test until all test scripts pass. You can view the "Pass" or "Fail" status of each test transaction in real-time, as you process them, within the Sandbox tab of the Rapid Connect web site.

Your project credentials will be needed for your Development process, and are located in your Project Profile. To access your Project Profile page, log in to the Rapid Connect Web Application and select the appropriate Project/TPP ID from the My Projects component on the Dashboard. This will take you to the Project Profile where your project status and credentials are located.

Project credentials include your Merchant ID (MID), Terminal ID (TID), and Group ID (GID). Please remember that your Production credentials (MID, TID, and GID) may vary in attribute and length from the Test MID, TID, and GID you have been provided. The MID is a variable field that can be Alpha-Numeric and up to 16 characters in length. The TID is a variable field that can be Alpha-Numeric and up to 8 characters in length. The GID is a variable field that can be Alpha-Numeric and between 5 and 13 characters in length. In the Development stage, you may use the three TID's provided; however, in the Certification stage all transactions must be processed on TID 00000001.

- The number of test cases you receive will depend upon your individual project parameters.
- We recommend that you test every script, and make adjustments where necessary, so all test scripts are passing before moving to the Certification stage.

***Time-out Reversal testing (required) must be performed prior to moving your project to the Certification stage. These cases are for your internal unattended testing for developing TOR message format.**

**There will be a final attended TOR test with cert analyst using test cases and various scenarios from certification script.**

****All test cases from mandatory tab must receive 'pass' scores before moving the project to next phase, unless noted otherwise by cert analyst.**

***** Functionality certified within your project may have limited Fiserv platform availability. Depending on the scope of your project, some features may not be available on all Fiserv platforms. Merchants utilizing your application should be boarded accordingly.**

## Certification Stage

In this stage, you will validate your payment application can successfully process all tests outlined in the Certification Test Script. To begin Certification, go to your Project Profile page in the Rapid Connect Web Application and select Edit Project. The “Update Status” drop-down box will then be displayed. Select “Certification” and then “Save Changes” on the same screen. For Certification, you must use TID 1. All test cases from mandatory tab must be submitted similar to what was done during development phase.

In the Certification stage, you may run each test script transaction multiple times; however, only the last transaction run will be retained for validation, and must be given a “Pass” score. You may review your progress without ending your Certification testing in the Sandbox. Selecting the View Validation Report button will indicate to the system that you are ready for your test script to be validated as a whole component. If your test scripts were processed, and the Validation Report shows errors, you must move your project back to development to make any necessary corrections. Once corrected, you can move the project to Certification stage and re-run the failed transactions. All passing transactions should retain the status of the last run. Successful completion and validation of all test scripts (i.e., pass - no errors) will ensure promotion of your project to the Review stage automatically.

## Review Stage

After receiving your successful certification Validation Report, a Certification Analyst will review the validation results and confirm all certification requirements are met. Any outstanding items will need to be completed prior to moving into the Accepted Stage.

- Any manual validation if specified by your unique project requirements
- EMV testing (if applicable)
    - EMV QRG contains EMV specific Receipt Requirements
    - Transaction Receipts validation is required in EMV Brand certifications
    - Receipt Requirements are located within the Quick Reference Guides (QRG). QRG's are available in your project SDK, and on the Rapid Connect Web Application – right hand side, Toolkit Documents (Resources), then left hand side, Rapid Connect Quick Reference Guides (Categories).

## Accepted Stage

The requirements of this stage are focused on the compliance and business processes associated with certified payment applications including verification of PCI-DSS certification by TPSPs, or PA-DSS attestation by payment application companies. In addition, we will verify that any required business agreements between the payment application partner and Fiserv, or other companies, are fully completed.

## Complete Stage

You will be notified by email when your project has reached the Completed status in Rapid Connect*. Your certification letter will be available for download from the Rapid Connect Web Application tool at such time.

*Functionality certified within your project may have limited Fiserv platform availability. Depending on the scope of your project, some features may not be available on all Fiserv platforms. Merchants utilizing your application should be boarded accordingly.

# Software Development Kit (SDK) Components

## UMF Specification and Developer Resources:

### RC Toolkit Sample Code Zip:

This is your starting point to understand how to create your interface to Rapid Connect. The sample code is supplied as a guide for you to model transactions within your payment application. It is not intended to replace your actual development and coding effort.

In this zip file, you will find sample code in Java, C#, and PHP development languages for a couple of transactions using the various communication methods supported by Rapid Connect. There is a readme.txt file inside the folder for each development language. Please refer to the readme.txt file for instructions on how to use the sample code supplied in that folder.

### Secure Transport Guide Zip:

The Secure Transport documents will only be present if the communication type selected in the project profile is Datawire. If you selected Datawire for your communication method, a member of the project team will contact you to review your connectivity requirements.

The Secure Transport Guide Zip file contains multiple documents with the details to integrate Datawire with your application, and to communicate with Rapid Connect. Applications using the Datawire Secure Transport XML and SOAP Interface may receive HTTP Errors or Network Errors reported by the Datawire Secure Transport Network.

### TCP/IP Guidelines:

The document will only be present if the communication selected in the project profile will be MPLS or VPN.

The TCP/IP Guidelines contain the details to communicate with Rapid Connect over a leased or dedicated line connection using TC/IP protocols. Reference this document when reviewing the sample code in the toolkit if you will connect over a leased or dedicated line. You will receive the IP and Port within your test setup package or from the Rapid Connect support staff

### UMF Specification:

This is the message format specification for Rapid Connect. Read this document after you have reviewed the Toolkit (see above) and before you start your development and coding. The UMF contains detailed request and response fields/tags for each transaction. The UMF Specification also includes field definitions, business rules, and more.

Use this document in conjunction with the UMF XML schema (see below) to understand the details of all fields, the transactions, and the major functionalities supported by Rapid Connect.

### UMF XML Schema:

The Schema document contains the Rapid Connect XML schema per the UMF specification.
Reference this document when reviewing the sample code in the toolkit and to generate the code in your development language.

- Specific transaction XML examples can be generated through the Rapid Connect Web Application using the Transaction Builder
- The elements defined in the XML Schema must appear within your transaction request in the order specified (as they do in the schema). Empty tags should not be transmitted within your request message

## Quick Reference Guides (QRGs):

You may receive several or just one QRG in your SDK, depending on the functionality your payment application will support. The quick reference guide provides high level information about your selected industry and some functionality such as EMV, Purchase cards, Ecommerce, etc.

## Test Scripts:

### Certification Scripts:

These are test cases that your payment application will be required to pass 100% in order to be certified with Rapid Connect. There may be multiple files according to the industries and payment types you have chosen to support, and as entered in your Project Profile. Submission of the certification test cases **must occur on TID 00000001**

### Unit Test Scripts:

Contains test cases that will help you test combinations of payment types and features. There may be multiple files according to the industries and payment types you have chosen to support, and as selected in your Project Profile. Although the unit test scripts are not required to certify with Rapid Connect, we strongly recommend that they be included during your development testing phase. This would greatly help improve the quality of your software and confirm that all payment functionalities were adequately implemented. Our Fiserv Cert Analysts are available to assist in case you require any additional support.

***Certification scripts are found in the 'mandatory tab' within the SDK test script. Unit test scripts are found in the 'non-mandatory tab' within the SDK test script.**

**Disclaimer:** Fiserv is not liable if issues occur in production for transactions that were not executed in the Unit Test Script.

### Ad Hoc Testing:

In addition to the Unit and Certification test scripts in your SDK, we have established functionality that allows you to create your own test cases. The test cards below are provided for this purpose and should only be used in the Rapid Connect Sandbox.

| | |

## TimeOut Reversal (TOR) Testing:

Please refer to the TimeOut Reversal Testing Quick Reference Guide included in the SDK for guidance on how to perform TOR testing for your individual project.
