Technical Document

Datawire Secure Transport Integration and Certification

Document Revision 1.2
January 17, 2025

Datawire

Obtain Datawire Information/API Documentation

1. Log into the Rapid Connect portal to access your project (https://www.rapidconnect.com/rcpub/pubapp/RapidConnectPub/)
2. Download your SDK
3. Unzip your SDK and navigate to the Secure_Transport_Guide.zip
    a. SDK_YOURTPPID\UMF Specification and Developer Resources\Secure_Transport_Guide.zip
4. Unzip the Secure_Transport_Guide.zip
5. Review the Datawire documentation
    - Step By Step SRS Process for Secure Transport Rapid Connect.pdf
    - SecureTransport-SRS-RapidConnect.pdf (How to do "SRS" Self-Registration to acquire DID)
    - SecureTransport-RapidConnect-Guide.pdf (How to send transactions with the acquired DID)
    - Datawire Parameter Guidelines for Rapid Connect.pdf (guidance on Datawire parameters you need to set in your app)
    - Required_TLS_Ciphers_Secure_Transport_RapidConnect.pdf
    - Required_Root_CA_Certificates_SecureTransport_RapidConnect.pdf

Datawire Secure Transport Integration Analyst Assignment / Kick Off Call / Certification Scope determination

Your Fiserv liaison should coordinate a kickoff call with your Datawire Secure Transport Integration Analyst or provide an email introduction. During your Introduction, your Datawire Secure Transport Integration Analyst will provide details regarding the scope of the Datawire certification (full or re-certification); if this introduction has not been completed, please request this through your Fiserv liaison.

To obtain support from the Datawire Secure Transport Integration team, email: securetransport.integration@fiserv.com.

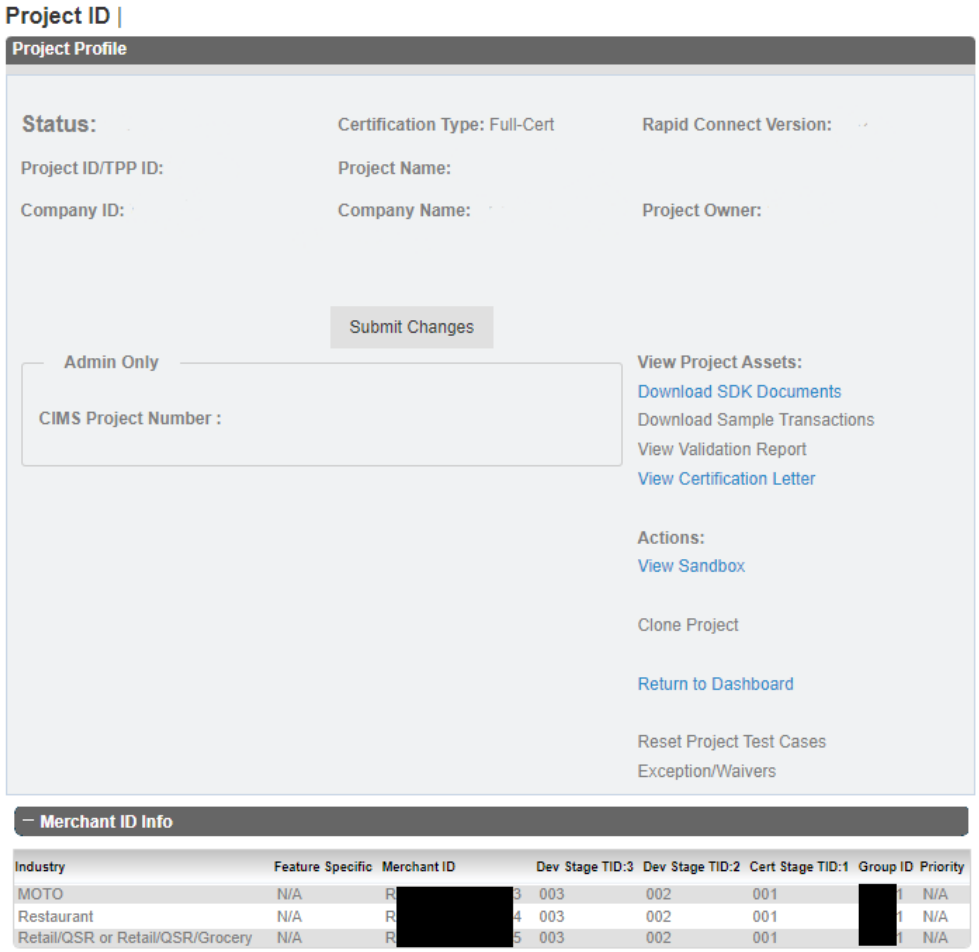
Obtain Account Credentials to begin development/self-testing

1. Within your Rapid Connect project page, expand the Merchant ID Info section to obtain your Rapid Connect GroupID(s)/MID(s)/TID(s).
2. Use your Rapid Connect MID(s)/TID(s) in conjunction with the Datawire Parameter Guidelines for Rapid Connect.pdf to set required parameters to send to Datawire.
3. Create your Datawire requests using the required parameters as described in the SecureTransport-SRS-RapidConnect.pdf and SecureTransport-RapidConnect-Guide.pdf located in your SDK.

Note:

- Each MID/TID/ServiceID/APP combination is assigned a unique Datawire ID which cannot be used with other MID/TID/ServiceID/APP combinations. Your application must manage each unique combination of IDs.
- Datawire ID must be saved securely and not accessible by unauthorized entities.
- We strongly recommend that there be an automated process for SRS that can be easily re-triggered as needed. Implementing SRS in a manual way (e.g having a developer crafting the messages on the spot) is prone to human error and is not sustainable. Upon performing the SRS,

we recommend that your app automatically propagate the activated DID/URL(s) from SRS to allow transaction processing.



Datawire Certification

1. Once all development and self-testing has been completed, fill in Datawire certification form required for your project as determined during the initial scope discussion
    a. Datawire Compliance Test Form for Rapid Connect.doc (full certification)
        - Directed at clients certifying their solution for the first time (or for major updates to an already certified app).
    b. Datawire RapidConnect Re-Certification Compliance Script.doc (re-certification)
        - Directed at clients making minor updates to an already certified solution. Check with the Datawire Secure Transport team to verify if you're eligible for this quicker process.

2. Once validated and sign off is provided, your Datawire Certification Analyst will coordinate an attended test session (Part 2 – Audio Test) – **Note:** This generally applies to full certification projects, but your Datawire Secure Transport Integration Analyst may determine the Part 2 – Audio Test may be required with a re-certification depending on the changes implemented in the client application.

- During the audio test, you will be asked to perform the SRS process and send transactions as your test activity is validated.

3. Once both part 1 and 2 have been completed, your Datawire Secure Transport Integration Analyst will issue you a release letter concluding Datawire certification.

Host Certification

1. Work with your Host Certification Analyst to complete this certification.
   - Any questions related to the host message format/certification should be directed to your Host Certification Analyst.
2. Host Certification analyst will issue a host release letter or other means of confirmation once all required tests have been completed and validated successfully.

Application Promotion

Work with Fiserv liaison to determine production availability and/or requirements for your application.

Conditions of Compliance

It is the responsibility of the vendor to ensure the Datawire Secure Transport Compliance Testing is scheduled at the end of the application's design cycle in order to minimize the risk introduced by potential code churn. Datawire Secure Transport Compliance will remain in effect until "modifications" to the application software or payment engine are made that could impact the certification status.

It is the responsibility of the vendor to engage with the Datawire Secure Transport Integration Team for a periodic review of the existing certified solution and any updates made to compliance criteria (if any) within 2 years from the date of certification. Certification is only valid for 2 years from the date of certification completion.
